### NEW TSe WEIGH CONTROL SYSTEM

In response to customer demands Tatham have designed a new weigh system offering a simple and cost effective solution.

The TSe range offers an alternative system to monitor and control fibre delivery for applications that do not require the advanced features of the highly successful TS weighing range.

Designed to replace an existing Microweigh 2000 (Tatham) or XL (Garnett Controls).

With microprocessor boards becoming obsolete it is necessary to replace the electrical panel, retaining all existing external components.

Alternatively it can be supplied with the required mechanical parts to create a complete weigh system.

Applications include blending hoppers, carding machines, servolap replacements

#### Features

- New simple control system
- Incorporating the latest weigh controller
- User friendly operator interface with 14mm high character green LED
- Simple calibration procedure
- AC variable speed drive to spiked lattice
- Panel mounted for attaching to hopper or wall
- Encoder to synchronize with existing line speed
- Suitable for single hopper controls with drop compensation

#### Options

- Weigh pan assembly (Microweigh TSe) or Weighing zone (Microfeed TSe)
- Feed roller speed adjustment
